Lift and Slide Doors

PRODOMO

DOORS & WINDOWS

- Solid 2 ¼" thick Mahogany Construction
- Once operated the carriages will lift from the sill to allow the very large panels to glide easily and quietly, with no friction on the bottom track or weather-seal. The panels can be stopped at any position to allow for easy access and ventilation.
- Lift and slide doors maximizes views with more visible glass and allows for wider openings than a standard sliding door.
- Architects love the flexibility of the design to meet their window wall needs.
- Carriages can support up to 660 lbs per panel.
- Compressible weather-seals.
